

# AUTOMATION DRIVE TECHNOLOGY

- Drive technology for extruders, winders and downstream units
- Control technology and programming
- Electrical system design
- Safety engineering
- Data systems and concept creation
- Control cabinet production
- Installation and commissioning
- Service hotline 24/7
- Siemens Solution Partner
- Consultancy, planning, installation, commissioning from a single source

Our partner:  **lebbing**  
Jagenberg Group

Well-maintained production lines, whose mechanical components have been regularly maintained, are often an effective alternative to buying a new machine.

Retrofitting means that only the electrical drive and automation components need to be replaced. Retrofitting is therefore the cost-efficient alternative to new extrusion line.

Consultancy, planning, production, installation and commissioning from a single source. A high level of expertise at all levels, including a service hotline (24/7) guarantee the best support for all technical requirements.

With Lebbing we have a very competent partner for the drive technology RETROFITs of blown and cast film lines.
