

# AUTOMATION TEMPERATURE HANDLING

- Complete temperature handling for blown film and cast film extrusion lines
- Innovative heating band for fast and precise temperature control
- User-friendly software
- Control cabinet incl. SSR components, current measurement and load drop
- Energy-efficient cooling fans
- Consultancy, planning, installation, commissioning from a single source

Our Partner: **WEMA**®

The temperature control of extruders and die heads is an important component of extrusion lines. Temperature fluctuations due to old software and hardware can quickly lead to problems in the manufacturing process. Due to frequent material changes, temperatures have to be changed again and again.

With WEMA's innovative heating bands, a very fast and precise temperature makes handling

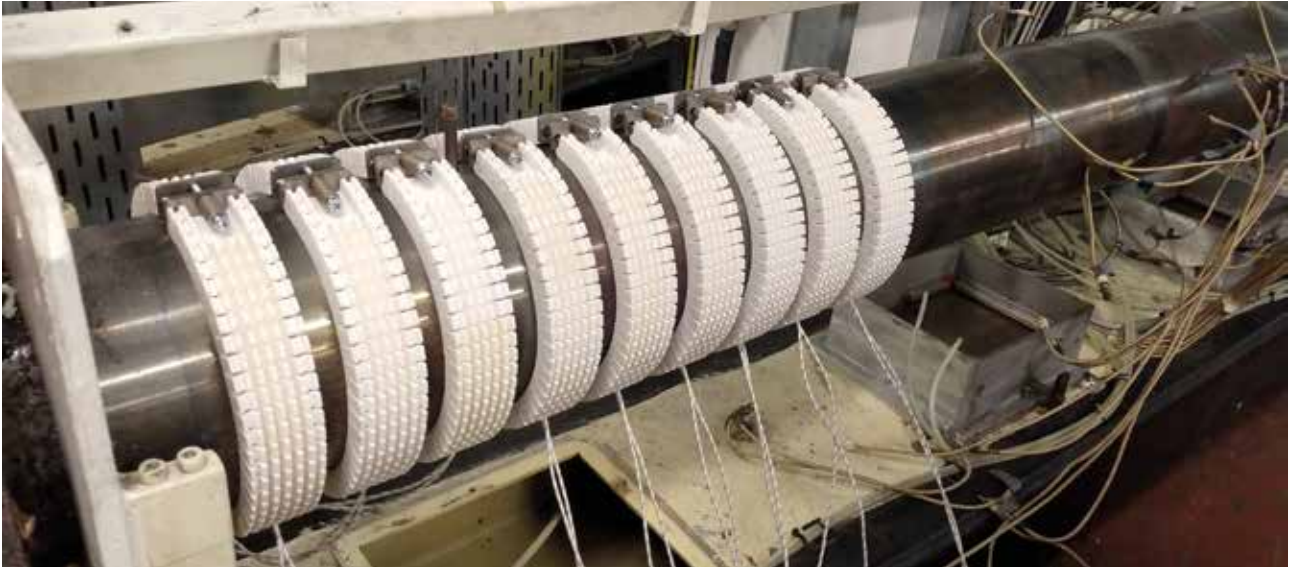

possible. User-friendly software supports the input, a control cabinet with modern standard components ensures load distribution and WEMA heating bands and blowers keep the set temperatures within a narrow tolerance.

With DHHV you get the retrofit from a single source.

## OLD ALUMINIUM HEATING BANDS BEFORE CONVERSION

## INSTALLATION OF THE NEW WEMA HEATING BANDS

## AFTER CONVERSION INCLUDING NEW FANS AND COVER
